

COMPLETE LATTICE TOWER SYSTEMS

INTEGRATED SOLUTION FEATURES THIRD-PARTY TOWER AND CHOICE OF NRG INSTRUMENTS.

NRG Systems has been providing turnkey tubular tower systems for wind resource assessment for more than 35 years. Because resource assessment practices can vary project to project as well as region to region, in addition to our landmark tubular tower systems, we offer complete lattice tower systems.

Lattice tower solutions are ideal for capturing hub height measurements greater than 80 meters, when tubular towers are not an option. We work with a global network of lattice tower suppliers and installers to provide these systems, which include a lattice tower from an authorized third party, as well as NRG sensors and data logger. Installation services are also available.

Key Benefits:

- Obtain measurements at heights greater than 80 meters
- Components ship together for maximum efficiency
- Fully integrated system is more cost effective than purchasing components individually
